

Material Planning

The PowerLink options for MRP, VPI and Thru-Put planning

Jim Simunek

Senior Consultant

Jim.Simunek@cistech.net

Material Planning Introduction

- With Release 9.1 of XA, Infor created a new XA application, 'Material Planning'
- The purpose of Material Planning is to bring planning functions into PowerLink
- Everyone with an MRP, VPI or Thru-Put license is entitled to a Material Planning License key **at no additional charge**
 - However, you must request the license key from Infor, they do not supply it automatically

Material Planning Introduction

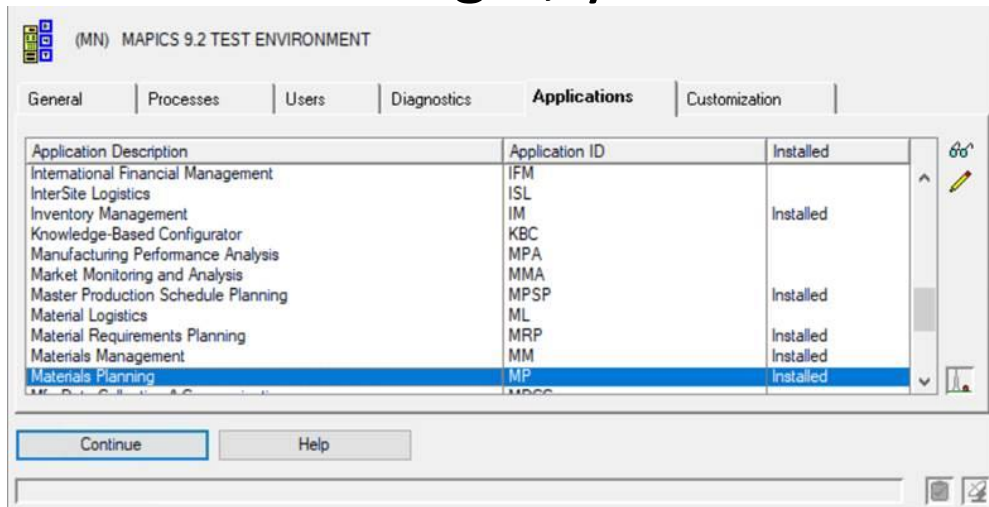

- At release 9.1, after receiving and applying the Material Planning license key there are 2 PTF's that need to be applied:
 - SH49406
 - Horizon Values
 - Period Intervals
 - Planning Execution Options
 - Planning Run (Host Job – MRP only)
 - Report Options
 - SH50147
 - Item Requirements Inquiry brought into Item Warehouse as new 'Planned Activity' overview card
- At R9.1, you need to be at level 3.37 or higher of the client/PowerLink
- At release 9.2, installing the license key should be all you need to do. If you do not see the planning fields in the warehouse card you may need to run MRP install/tailor

Material Planning License Key

- The license key is entered using the ADDLICENSE command on the green screen of the iSeries. You can also do a WRKLICINF PRDID('5I*') and scan for the correct product and term

Opt	Product	License Term	Feature	Description
—	5I33M7X	V2R9	5143	QRMS - Quality Reporting and Mgmt System
—	5I33M7X	V2R9	5144	AM+ - Accounting Management Plus
—	5I33M7X	V2R9	5145	CMS - Coil Management Solutions
—	5I33M7X	V2R9	5146	EFIN - Enterprise Financials
—	5I33M7X	V2R9	5147	MCMI - Maintenance & Calibration Mgmt
—	5I33M7X	V2R9	5148	MP - Materials Planning
—	5I33M7X	V2R9	5149	Infor reserved

- In Link Manager, you need to turn on the install flag for the application

XA Planning Engines

Material Requirements Planning (MRP)

- MRP is the oldest of the 3 planning software options
- 5 steps to a planning run
 - Gather all the requirements for an item and put them in date sequence
 - Net the requirements against the quantity on hand and on order
 - Generate Expedite, Defer and Cancel messages when dates on orders do not align to the date of the requirement
 - Create Planned Orders where on hand/on order does not satisfy requirements
 - Calculate the Start Date of the planned order using the Lead Time
 - If the start date is before the MRP Current Date, add a '31 Release & Expedite' message
 - If the start date is before the MRP Release Date, add a '51 Release' message
 - M-Plan Orders generate 'Peg To' requirements to the components of the BOM
 - Start date of the M-Plan will be the 'Required date' of the Peg To Requirement

Item Requirements Inquiry

AMM511

Item Requirements Inquiry

F6=Next item
 F24=Exit

Visual Planner (VPI)

- VPI introduced Capacity Planning with Material Planning
- Download all required XA files to an Access database on a PC or Server
- Lead Times for make items are ignored and VPI uses the item's routing or Item/Line file (Repetitive) to backward schedule work center load and calculate the start date of the M-Plan order.
- Will overload a work center's capacity
- Designed for the Master Scheduler to review capacity load and material shortages prior to saving the plan back to the iSeries/AS400 XA files
 - Updates the Planned Order (PLNORD) and Requirements (REQMTS) files so 'Item Requirements Inquiry' can be used same as MRP
 - Updates MO **Operation** Start/Due dates on released MO's if moved for capacity. Tailoring specifies if Order Start/Due date is updated.
 - Does not update PO Item start/due dates on existing orders

Visual Planner (VPI) Load to Capacity

Thru-Put

- Thru-Put uses the theory of constraints (i.e. the book *The Goal*) to limit the manufacturing orders going through a constraining work center (called a 'drum')
- Customer Orders and forecasts are the driving requirements
- Schedules material and labor to maximize output of drum work centers and optionally updates scheduled ship dates on CO line items based on production schedule
- Will not overload a work center

ThruPut Integration with MAPICS XA

Material Planning

Warehouse Master

- Warehouse Master has a new 'Planning' card that replaces MRP menu choices from the 'Planning Run Options':
 - Planning Run Execution Options
 - Used by all 3 planning applications
 - Maintain Horizon values
 - Used by all 3 planning applications
 - Planning Run Report Options
 - Used by MRP
 - Maintain Period Intervals
 - Used by MRP
- Has Host Job to launch an MRP Planning Run

Execution Options

Combine customer backlog orders <input type="checkbox"/>	Minimum days to reschedule orders <input type="text" value="0"/>	Warehouse reschedule <input type="text" value="Cannot auto reschedule"/>	Cancel exception <input type="text" value="Do not reschedule"/>

Item Warehouse Records

- A new view has been added to Item Warehouses called 'Planning'
- It includes 2 new fields:
 - R-RVS – Recommendation Reviewed Show
 - S-RVS – (Master) Schedule Reviewed Show
- If, when working on the planned order from the 'MRP Recommendations' object, you click the 'Bypass' button, the column will show a check mark

Planned Activity Card

- Infor has created an overview card that shows the 'Item Requirements Inquiry' information plus additional:
 - Source of demand – top level requirement that created this requirement
 - For Customer Order requirements, the CO, Line Number and Customer Name
 - Net Change quantity
- If you're used to working in Item Requirements Inquiry, it takes getting used to the card. At first look, it will appear 'too busy'

Planned Activity Card - Collapsed

Releasing/Updating Orders from Planned Activity

- You can select an order by single clicking on it from the Planned Activity Card then a right click to bring up the 'Maintain' Menu
- This is not an option in 'Item Requirements Inquiry' which, in my opinion, makes this a much more powerful tool
- Maintenance options to
 - Create an order from a planned order
 - Firm plan an order
 - Accept an expedite or defer message and update the MO/PO/Schedule with the new date
 - Check Component Availability for M-Plan orders

Releasing/Updating Orders from Planned Activity

The screenshot displays a software interface with a tree view on the left and a data table on the right. A context menu is open over the 'Maintain' option in the tree view.

Tree View Structure:

- Firm planned M.O. (5,000.000)
- Activity summary (10,000.000)
- Requirement (1,858.000)
- Planned M.O.
- Activity summary (10,000.000)
- Requirement (10,000.000)
- Planned M.O.
- Activity summary (10,000.000)
- Requirement (10,000.000)
- Planned M.O.
- Activity summary (7,500.000)
- Requirement (7,500.000)
- Planned M.O.
- Activity summary (7,500.000)
- Requirement (7,500.000)
- Planned M.O.
- Activity summary (9,000.000)
- Requirement (9,000.000)
- Planned M.O.
- Activity summary (15,000.000)
- Requirement (15,000.000)
- Planned M.O.

Other Cards

- Infor created a new card file called 'Planning' which contains other new cards:
 - Material Plan – holds the Planned Activity card
 - Planning Recommendations – holds the MRP recommendations for the item along with informational fields
 - MLI Schedule – equivalent of the 'MLI vs. Forecast/Orders' screen in green screen

3:21 PM
6/11/2012

Tool Bar Options

- Accept – for Expedite & Defer, accept recommended date
- Create Order – for 31, 51 and 0, create order
- Change an existing order
- Change a planned order to a firm planned order
- Cancel an order – 72
- Reset (reverse a previous action; not using immediate processing)
- Process – If ‘Immediate Processing’ is not selected in preferences, you must run ‘Process’ to have your actions executed
- Check Component Availability – for make items, check the component quantity required vs on hand to determine if there is enough inventory to manufacture the item

Exceptions

- *0 Blank* – MRP planned order with no recommendation but within the Review Horizon
- *11-24 Past Due* – due date is earlier than MRP Current date
- *31 Expedite & Release* – MRP planned order where order start date is earlier than MRP current date
- *33 Expedite Existing Order* – bring in order earlier than Due Date; total time is less than lead time
- *42 Reschedule Existing Order*- bring in order earlier than Due date; total time is within lead time

Recommendations

- *51 Release* – order start date is within the ‘Release’ date as defined in MRP horizons
- *62 Defer* – push the order due date out
- *72 Cancel* – cancel the order since the total requirements are less than order quantity
- Field to add when creating the view is ‘Exception Status’
 - Can specify to display:
 - Value – number
 - Alias – description
 - Both value and alias

Suggested Subsets

- Planner Number
- Exception Code
 - Separate subset for each exception condition:
 - Past Due (Date Lo)
 - 31 Expedite & Release with 51 Release
 - 33 Expedite & 42 Reschedule
 - 62 Defer
 - 72 Cancel
- Offset Days
 - Use to filter messages with a low number of days in subsets with expedite/defer messages

Shortage Checking

Component Shortage Checking

- Hold down the 'Control' key (on your keyboard) and click on the orders you want to select for shortage checking
- After all orders have been selected, right click then select 'Maintain' then 'Component Availability Check'
- A window will be displayed asking if you want to create a temporary file, click 'yes'

Create Cancel Help

Component Shortage Checking

- On the 'Component – Short' card
 - Only components that are short will be displayed
 - Click on the plus button to the left of the item to see which MO(s) will have shortages
- On the 'Potential Orders' card
 - You can remove selected planned orders by clicking on the order and then click on the delete (trash can) button on the right side of the card
- If you want to create the MO's for all Potential Orders, click on the 'Create' button (lower left corner)

Working the Recommendations

- For '31 Release & Expedite', '51 Release' and '0 Blank' Recommendations
 - Use the 'Create' recommendation button  to bring up a card file to create a new order
- For '33 Expedite', '42 Reschedule' or '62 Defer' Recommendations
 - Use the 'Accept' recommendation button  to process 'Expedite' or 'Defer' messages
 - Will change the due date on PO Item/Release or MO

Create a New MO

- Single click on the planned order then click on the 'Create Order' button 
- A card file will be displayed with all the information in the planned order (dates, quantity, etc.)
- Can change any of the fields displayed
- Can select an alternate process (EPDM)
- Can copy the bill & routing to the MO or copy them in later

Create MO

Expedite/Defer

Infor (PI) Accept MRP Recommendation

Are you sure you want to Accept MRP Recommendation (Scheduled receipt Item: 039219 Whs: B Exception: 62 = Defer)?

Options

Immediate processing of this transaction

Print shop packet at M.O. release

Preview before accept

Accept Cancel Help

- Single click on the recommendation
- Click on the 'Accept Recommendation' button  (clipboard with green check)
- Card above will be displayed
- Click 'Accept' and date on the order will be changed

Creating Purchase Orders

Purchase Orders

- If the recommendations are for purchased parts, you can:
 - Create a new PO
 - Add an item to an existing PO
 - Add a release to an existing blanket
 - Let the system find the existing blanket and add the release, if it doesn't find a blanket, it will create a new PO

Create Order Bypass Cancel Help

Purchase Options

- Find or Create
 - If an existing blanket PO exists for the item, will add a release to the blanket order
- Attach to Blanket
 - Adds the planned order as a release to an existing blanket
 - Must enter the blanket PO number (without the 'P')
- Attach to Existing PO
 - Creates a new item on a PO
 - Must enter the PO number (without the 'P')
- Create PO
 - Creates a new PO for the item

Purchase Options

- Only field not available is 'Purchase Price'
- Purchasing Control File determines the field that holds the default PO price
 - Current Material This Level (from Item Mst/Rev B)
 - Purchase Price (from Item Mst/Rev C)
 - Unit Cost Default (from Item Mst/Rev A)
 - Standard Cost (from Item Bal)
- Default field can be displayed on the card but cannot be entered

Conclusion

- Material Planning is providing more options for reviewing planning recommendations as well as the majority of options in green screen MRP menus
- It doesn't matter which planning application (MRP, VPI or Thru Put) you're running, all files that PowerLink uses are updated
- Compare the 'Planned Activity' card to the 'Item Requirements Inquiry' screen
 - The more you use 'Planned Activity' the easier it will become
 - 'Planned Activity' has much more information on it
