# The Power of PowerLink Part 2

Cards, Card Files, Workbenches, Presentation Schemes Jim Simunek, Senior Business Consultant Jim.Simunek@Cistech.net

# Session Topics

- Cards
- Card Files
- Workbenches
- Workspaces
- Presentation Schemes in a View
- Quick Change
- Export Options

#### Cards & Card Files

## Cards & Card Files

- Cards hold information/data
  - 7 different types of cards
- Card Files hold cards

# Card types

- Attribute holds/displays fields
- List List of records in an associated file controlled by View, Subset and Sort
- Overview Icons display information about the file with drill down capabilities
- *Graph* For numeric data (i.e. costs) bar, pie or line graphs
- Tabbed holds other cards (not available for Compound section)
- Compound up to 4 sections displaying information about the item
- *Related* can bring in cards from related files

## Attribute Card

- Attribute cards are primarily used for entry, maintenance and inquiry
- Define the fields to display on the card
  - Can create blank lines/subject headings
  - Can insert column breaks
- Right click on a field in an attribute card to copy the field value to your clipboard
  - In the example here, 'Item' field was added twice so that the item number could be copied then pasted

<						>		

- A list card has all the same control elements (view, subset and sort) as an object list
- Most under-used card type
- You can right click on a column heading to create a temporary subset
- You can add totals and/or count to your columns

#### Compound Card

- Sections can be defined as:
  - Attribute
  - List
  - Graph
  - Overview
- You can define your own section or insert a pre-existing card

## Graph Card

- Graph style is defined when creating the card:
  - Bar
  - Line
  - Pie
- Fields selected for the graph must be numeric
- Legend and field description are optional

- A Card File holds a group of cards (the tabs will tell you which cards are in a Card File)
- After creating a card it must be added to a card file in order to use/view the card
  - If you click the 'Apply' button after creating a new card, a pop up window will display asking 'Do you want to add the card to the existing card file?'
- The same card can be added to multiple card files

### Workbenches

# Workbench Overview

- With a Workbench, you can click on a record in one window and send that item/order to other windows providing multiple inquiries with a single click
- For example, from the Item Warehouse record, you could show:
  - Item Locations
  - Transaction History
  - Scheduled PO and MO receipts
- It's possible to have one workbench inside another workbench, for example
  - In the description above, the MO window could update the MO Components List and MO Operations
- Functionality in PowerLink is
  - Broadcast (from the originating window)
- Once the Broadcast/Receive functions have been enabled and tested, you can save the entire set up as a Workbench

- Right click on the 'Workbench' symbol to bring up options
  - Minimize workbench
  - Restore workbench
  - Close workbench

# Workbench tips

- If you've turned on Broadcast and Receive on 2 windows and the receiving window is not updating, check your 'Preferences' in the Broadcast window
- On the 'Broadcast' tab, uncheck 'Use Public Preferences' and add all the files on the left side of the card to the 'Broadcast' section:

☑ Use public preference					Workspace
Do not broadcast			Broadcast		List
			14 14/ h		Card File
Default stock location			item warenouse		Template
					Find
		>>			Broadcast
Planner					
vendor		<<			
warenouse					
,	<ul> <li></li> </ul>			_ ×	
	-				

# Save/Name a Workbench

- Verify that <u>there are no</u> windows open except the ones in your workbence then click:
  - Navigation
  - Add Workbench
- Give the Workbench a name, public or private
- 'Global' means that other windows not in workbench can broadcast or receive if needed for a temporary session

# Change a Workbench

- There is <u>no option</u> to 'Change' a workbench
- Open the workbench and:
  - Add or close windows
  - Change the size or position of the windows
  - Change the view, subset, sort, card file, active card, etc.
- Click on 'Navigation' then 'Add Workbench'; leave the name the same and it will overwrite the existing workbench with your changes (a warning will be displayed)

# Remove Windows from an existing workbench

- Click on 'Navigation' (from any window) and select 'Workbenches'
- A list of existing workbenches will be displayed
- To open a workbench, double click on the + to the left of the name
- To Remove a window from a workbench:
  - Click on the + sign to the left of the workbench name; a list of windows will be displayed
  - Right Click on the window you want to remove from the workbench and select 'Remove Window'

# Workspaces

#### Workspaces

- Workspaces allow for the same object to be added multiple times to a main card file card but have different subsets, views and sorts.
  - Customize the toolbar
  - Change the card file that opens when you double click on a line in the list
- Helpful if you have multiple plants and want each plant to only see their information
- Typically set up and maintained by IT Department

#### Workspace

- In the 'Selected Objects' window, you can see Item Warehouses is already on the card
- In the 'Available Objects' window, you can double click on Item Warehouses to add it again to the card

#### Workspaces

(IP) Application Card Attribute Definition								
Label	Item Warehouses

- When saving, you must 'Save' first and then use the 'Apply' button
- If you have a scheme in a field, the line scheme will not be used for that field
- In the example below, the scheme was for 'Quantity on hand less than zero'

# Quick Change

# Quick Change 📷

- For a person who doesn't have access to 'Mass Change', the 'Quick Change' option is a valuable second option
- Quick Change builds a window with fields based on the View
- Quick Change can be used from a list (top toolbar) or on a list card (side toolbar)

# Quick Change View options

(IP) View definition	×			
Default stock location				
	Character (7A			
Column heading				
Stock location				
Suppress quick change				
Position cursor				
Label	Default stock location			
Content	Value ~			
Visual control	Entry field ~			
Entry field width	7			
Presentation Quick change				
Continue Cancel	Help			

- When adding a field to a view, there is a 'Quick Change' tab
- Use the 'Position Cursor' option to have the field being change the field that the cursor is in
- If there's a field in the view that you don't want displayed on the Quick Change window, click the 'Suppress quick change' option

# Change Template

- If a field being changed is changed to a same value:
  - Create a Change Template
  - Check the 'Auto Advance' box in the Template and un-check the 'Preview before Update' option
  - Set the Change Template as the default in the Preference

# Quick change process

- Create a subset to display only the records to be changed
- Single click on the first record to be changed
- Click the Quick Change button
- Click either 'Update' or 'Bypass' to work your way through the records to be changed

#### Export options

## Export a List

- A list can be copied to an Excel Spreadsheet. To copy a list:
- Click on "File" on the Menu Bar.
- Click on "Export" from the File dropdown list of options.
- Check:
  - 'Clipboard' (make sure that your default system preference has been set for a large clipboard)
  - 'File' option will copy directly to a spreadsheet
  - Suppress Padding (removes 'null' characters from all fields so you don't have to do a 'Trim' command in Excel to create a pivot table or V-Lookup)
- Open Excel.
- Paste. The data from Mapics will be passed into the spreadsheet.
- Note: If all of the records do not copy, Mapics will display an Error window. To increase the size of the clipboard go to the Main PowerLink Card File. Click on "Customize" and then "Preferences".
  - From the Miscellaneous card, increase the capacity of the clipboard.

- Can copy to either your clipboard or send directly to a file
  - System preferences determine the size of your clipboard
- Suppress Padding removes 'null' characters from all fields so you don't have to do a 'Trim' command in Excel to create a pivot table or V-Lookup

# Summary

- PowerLink is a powerful tool that companies don't take full advantage of
- Using functions such as Preferences, Quick Change, Export, etc. will increase efficiency of accessing data and will replace many custom reports/queries
- Thank you for attending
